

Entergy is a leader in clean power generation

Protecting the environment is one of many ways that Entergy powers life today and for future generations, creating sustainable value for our customers, employees, communities and owners.

We have forward-looking policies that go farther than simple compliance with environmental regulations.

Entergy is recognized as an industry leader for taking bold action to address climate issues.

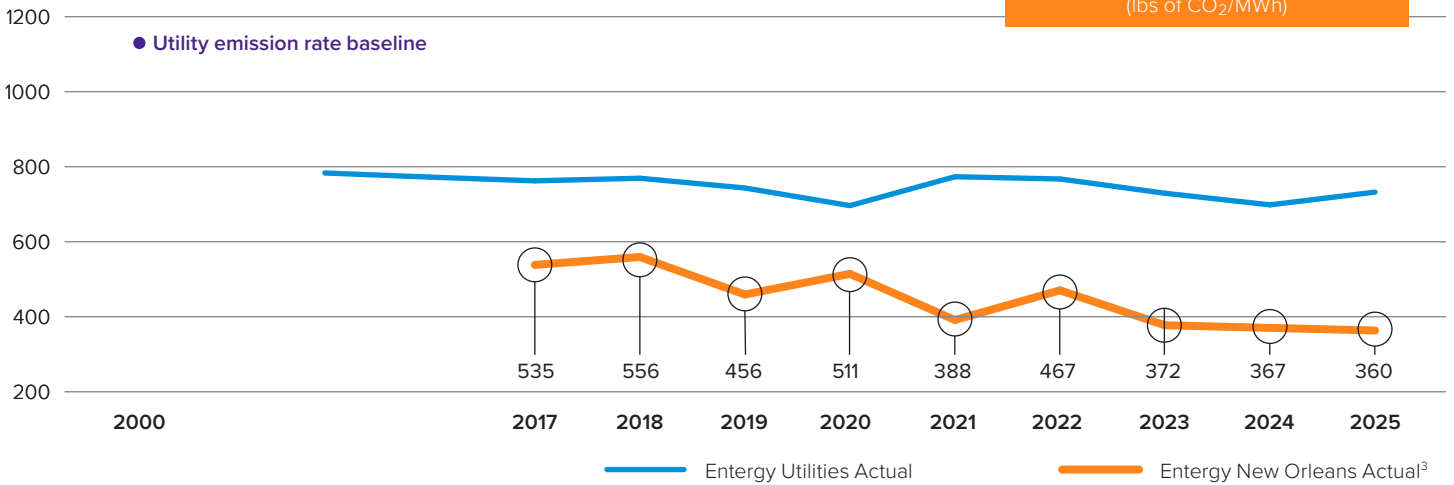

In 2001, we were the first U.S. electric utility to voluntarily commit to stabilizing greenhouse gas emissions.

In 2020, we announced our intention to achieve net-zero emissions by 2050.

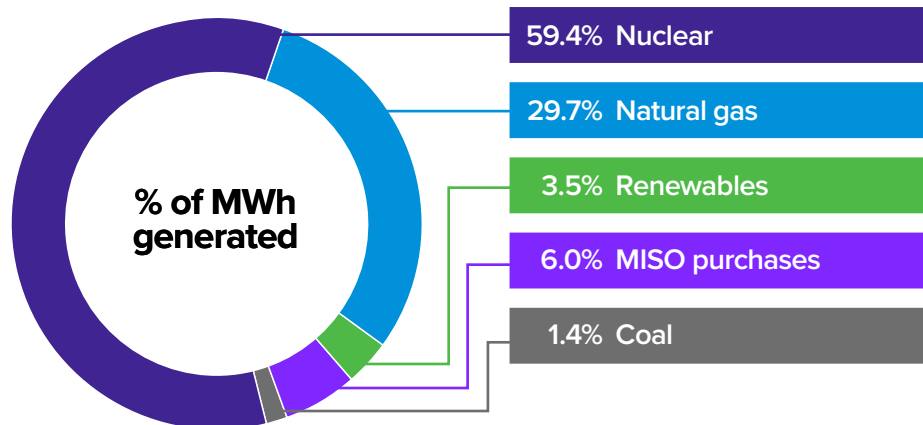

This goal, as well as regular performance-related disclosures, demonstrate our commitment to sustainability.

Learn more about our climate commitments by visiting entergy.com/environment.

Entergy's CO₂ emission rates over time² (lb/MWh)

Entergy New Orleans 2025 power generation mix⁴

¹ More information about Entergy's climate strategy can be found in our [2025 Performance Report](#) and by visiting [Entergy.com/Environment](https://entergy.com/Environment).

² 2025 emission rates were calculated using an hourly market-based approach of utility-owned generation and purchased power.

³ Individual customer scope 2 emission rates will vary depending on participation in green tariff and other clean energy offerings.

⁴ This is Entergy New Orleans' general customer generation mix and accounts for RECs associated with the New Orleans City Council's Renewable and Clean Portfolio Standard (RCPS) as well as customer participation in clean energy offerings, removing those subscriptions from the mix.
